

What is CMMS?

CMMS (Computerised maintenance Management System) is computer software that is designed to simplify maintenance management. It helps to optimize and manage the usability and availability of physical assets such as vehicles, machinery and communications. CMMS systems can be found in manufacturing, oil and gas, construction, transport and other industries where physical assets are critical.

ADVANTAGES OF CMMS SOFTWARE

Uses data and trends to utilise assets more efficiently

Reduces asset downtime by helping to schedule maintenance tasks

Effective work order maintenance

Helps to keep a centralised register of all physical assets

Modern applications include mobile access via cloud-based apps
